## Foreword

The Ministry of Health is pleased to present the Annual Health Bulletin (AHB) 2020, the 33rd edition in series. The bulletin is an important annual publication of the Ministry of Health, prepared based on the routine health data collected from the health facilities across the country. AHB 2020 presents comprehensive health information in Bhutan during the year 2019 and reflects the health status of the country and trends over the period. It is broadly divided into two parts. Part I presents state of nation's health in summary, highlighting some of the key achievements, challenges, and way forwards. Part II contains routine health statistics on morbidity, mortality and other aspects of health system including health indicators related to Sustainable Development Goals (SDGs) and national targets.

I anticipate that AHB 2020 will be useful for the policymakers, planners, program managers, researchers, service providers, and development partners to support evidence-based planning and policy formulation, to track health-system performance and to make effective health related decisions. It is also expected that the document will be an important source of information to the general public to know about the status of health in the country.

The publication of the bulletin could not have been possible without the relentless efforts of many individuals. I wish to extend my gratitude to all officials who have given their generous support in bringing up this edition of bulletin. My special appreciation goes to all the healthcare professional across the country for your continued support and dedication in providing routine data apart from your core mandate of delivering health care services.

I wish the best utilization of this rich source of health information to build a healthier and happier Bhutan.

***TashiDelek!***

(Dechen Wangmo)  
Minister  
Ministry of Health

## Acknowledgement

The AHB Secretariat is indebted to all healthcare professionals across the country for your continuous effort in gathering the routine health data and information, and making the publication of AHB 2020 possible. We would also like to sincerely acknowledge the support of following officials in terms of providing additional information and valuable contributions to the bulletin:

1. Mr. Sangay Thinley, Chief Human Resource Officer, Ministry of Health
2. Mr. Rixin Jamtsho, Chief Program Officer, Communicable Disease Division
3. Dr. Ugyen Tshering, Emergency Department, JDWNRH
4. Mr. Jit Bdr. Darnal, Surveillance & Epidemiology Unit, RCDC
5. Mr. Pema Lethro, Sr. Program Officer, RMNCH Program
6. Mr. Sangay Phuntsho, Sr. Program Officer, Vaccine Preventable Disease Program
7. Mr. Lekey Khandu, Sr. Program Officer, National HIV/AIDS Control Program
8. Mr. Doley Tshering, PO National HIV/AIDS Control Program
9. Ms. Rada Dukpa, Sr. Program Officer, National TB Control Program
10. Mr. Tobgay, Program Analyst, Vectorborne Disease Control Program
11. Ms. Pemba Yangchen, Deputy Chief Program Officer, Lifestyle Related Disease Program
12. Mr. Sonam Zangpo, Program Analyst, QASD, Ministry of Health
13. Mr. Tshering Wangdi, Sr. Planning Officer, Policy and Planning Division
14. Mr. Sonam Phuntsho, Sr. Planning Officer Policy and Planning Division
15. Mr. Karma Jurmin, Sr. Program Officer, Health Care & Diagnostic Division
16. Mr. Mongal Singh Gurung, Sr. Research Officer, Ministry of Health
17. Mr. Tandin Dendup, Sr. Planning Officer, Policy and Planning Division

## List of abbreviations

ANC	Antenatal Care
ARI	Acute Respiratory Infection
BHU	Basic Health Unit
BHTF	Bhutan Health Trust Fund
BCG	BacilliCallmalGurrina
BHSQA	Bhutan Health Standard for Quality Assurance
CBR	Crude Birth Rate
CDR	Crude Death Rate
CQI	Continuous Quality Improvement.
DHIS2	District Health Information System 2
DMPA	Depomedroxyprogesterone acetate
DPT	Dephtheria, Pertusis and Tetanus
FYP	Five Year Plan
GNM	General Nurse Midwife
HA	Health Assistant
HISC	Health Information and Service Centers
HIV	Human Immuno Virus
HMIS	Health Management Information System
HRD	Human Resources Division
ICT	Information, Communications and Technology
IMR	Infant Mortality Rate
IUD	Intrauterine Device
JDWNRH	Jigme DorjiWangchuck National Referral Hospital
LDC	Least Developed Countries
LLIN	Long-lasting insecticidal nets
LSRDP	Lifestyle Related Disease Program
MDG	Millennium Development Goal
MMR	Maternal Mortality Ratio
MoH	Ministry of Health
NACP	National HIV, AIDS and STI Control Programme
NCD	Non-Communicable Disease
NHS	National Health Survey
NTCP	National Tuberculosis Control Programme
OCP	Oral Contraceptive Pills
OOP	Out-of-Pocket
OPV	Oral Polio Vaccine
ORC	Outreach clinics
Pf	Plasmodium falciparum
PLHIV	People Living with HIV/AIDS
PHCB	Population and Housing Census of Bhutan
PMTCT	Prevention of Mother-to-Child-Transmission
Pv	Plasmodium vivax.

RGoB	Royal Government of Bhutan
RMNCH	Reproductive, Maternal, Newborn and Child Health
SDG	Sustainable Development Goal
TFR	Total Fertility Rate
VCT	Voluntary Counseling and Testing
VDCP	Vector-borne Disease Control Program
VO	Vasectomy Operation
WHO	World Health Organization
5S	Sort, Set, Shine, Standardize, and Sustain

## **Part I: State of Nation's Health**

### *Summary of Health Status and Trends*

## State of Nation's Health

The Constitution of the Kingdom of Bhutan which was adopted in 2008 mandates the state to provide access to free basic public health services<sup>1</sup>. As a matter of fact, the state has been providing free health care at the point of delivery since the advent of modern healthcare services in the early 1960s. As a result, Bhutan has made remarkable progress in improving the health and quality of life of its population in recent decades, achieving almost all Millennium Development Goals (MDGs). All these gains have been possible due to sustained and appropriate investments in the health system which is mainly driven by the primary health care approach. Despite impressive achievements, health sector faces great deal of challenges. Evolving health needs due to demographic and epidemiological transitions, rising healthcare cost, diminishing external support in view of Bhutan's graduation from LDC status in 2023, and persistent health inequities are some of the critical challenges faced by the Bhutanese health system.

The health agenda being the top priority of the current government, the Ministry of Health undertook several reforms and initiatives in 2019 with the aspiration to ensure universal access to health and to realize its vision of, "A Nation with the Best Health". The National Health Policy 2011 is being revised and the first ever National Health Bill is being drafted to chart out a comprehensive roadmap for the future. Programs on "Conditional Cash Transfer" and "Sprinkles" were initiated as part of the policy on accelerating the health outcomes of all mothers and children. The groundworks for establishment of the Multidisciplinary Super-Speciality hospital has been initiated to address our healthcare needs at the

sub and super-specialist level<sup>3</sup>. The Influenza vaccine was introduced in the country for high risk groups<sup>2</sup>. The application of ICT and digital solutions such as web-based District Health Information System 2 (DHIS2) was expanded across health facilities and the health flagship project on electronic Patient Information System (ePIS) was initiated. With a host of reforms being initiated, the ministry is fully geared towards achieving the 12<sup>th</sup> Five Year Plan (FYP) targets and the Sustainable Development Goals (SDGs) related to health.

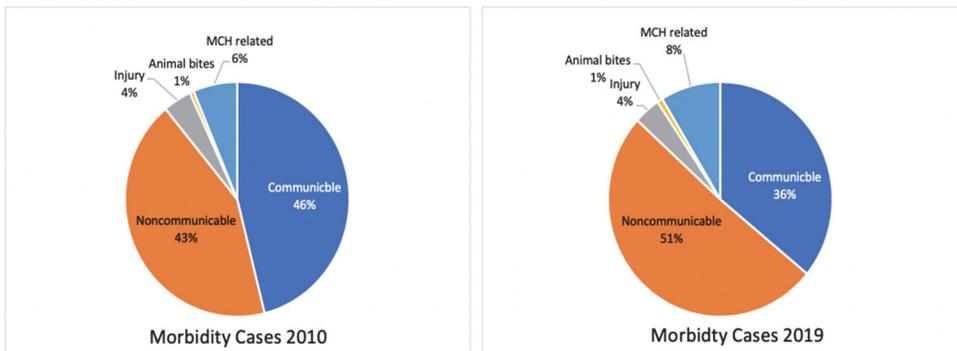

State of Nation's Health is laid out around four broad thematic areas for measuring the progress against Universal Health Coverage: 1. Reproductive, maternal, newborn and child health, 2. Infectious or communicable diseases, 3. Noncommunicable diseases and, 4. Service capacity and access.

## **1. Demographic and general morbidity and mortality trends**

The projected population for Bhutan in 2019 was 741,672 with 52% male population<sup>4</sup>. While the crude birth has declined from 19.7 to 15.5 between 2005 and 2017, the crude death rate has seen a slight reduction from 7.1 to 6.7 during the same period. Over the span of five decades, the life expectancy has more than doubled to 70.2 years in 2017, from 32.4 years in 1960. The Total Fertility Rate (TFR) has declined below the replacement rate, from as high as 5.6 to 1.7 between 1994 and 2017. While Bhutan still has a young population with median age of 26.9 years, the declining TFR and mortality rates are growing concerns as they result in population ageing and rising dependency which call for strengthening of existing health system for chronic care. About 6% of the population are currently above 65 years of age and the share of the elderly population is expected to rise

substantially in the coming years. The total dependency ratio stands at 47.0, implying that every 100 economically active persons will have 47.0 dependents<sup>5</sup>.

More than half of the morbidity cases attended by the health facilities in 2019 were due to noncommunicable diseases as compared to 43% in 2010. On the other hand, the proportion of communicable diseases has decreased by 10% during the same period. Animal bites constituted one percent of the total morbidity cases but was largely comprised of dog bites with staggering 7083 cases reported in 2019<sup>6,7</sup>.

**Fig 1:** Trend in morbidity cases in Bhutan (Based on HMIS data)

Common cold and skin related diseases continue to lead the top-ten morbidity list in the country. In 2019, common cold accounted for 19% of the diseases, followed by disorders of skin & subcutaneous-tissues and diseases of the digestive system which accounted to 7% each<sup>7</sup>. Although the top-ten morbidity by and large, remained consistent over the years, notable changes were observed in terms of diarrhoea and dysentery cases as they have seen

gradual decline over the years and were no longer among the top-ten morbidity by 2019. In the last 10 years, the diarrhoeal case has reduced by 35%, from 65,495 cases in 2009 to 42,366 in 2019<sup>7</sup>. Such an achievement can be largely attributed to increased access to improved drinking water and sanitation facilities. As evident, the proportion of the population with access to safe drinking water has increased from 45% in the 1990s to over 98% in 2017<sup>8</sup>.

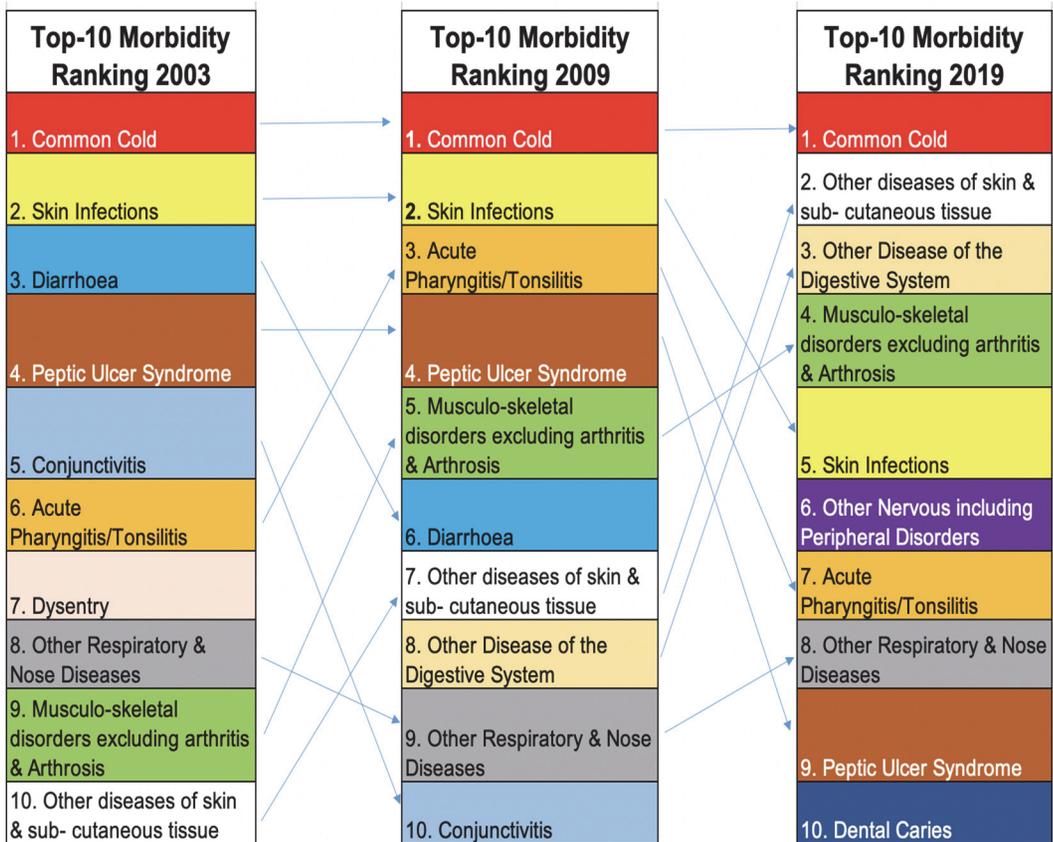

Fig 2: Trend in top-ten morbidity in Bhutan over the years (Based on HMIS data)

In terms of mortality, alcohol liver disease remains to be the biggest killer in the country as per the facility-based death reports. Of the 1264 reported deaths in 2019, alcohol liver disease claimed the highest number of deaths accounting for 11%, followed by other circulatory diseases at 8%<sup>6</sup>. While communicable diseases such as tuberculosis and other infections are no longer the top-ten causes of mortality in 2019, pneumonia has dropped its ranking from the second position in 2010 to seventh in 2019. On the contrary, non-communicable diseases are increasingly dominating the leading causes of death which calls for the need to scale up our prevention and control efforts.

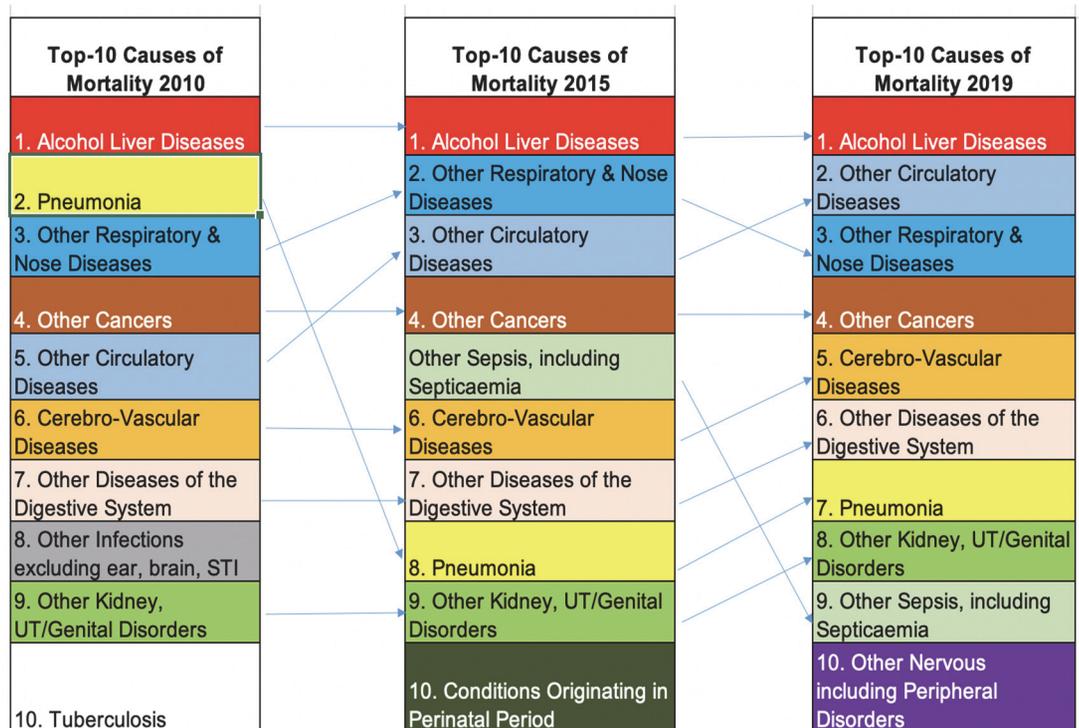

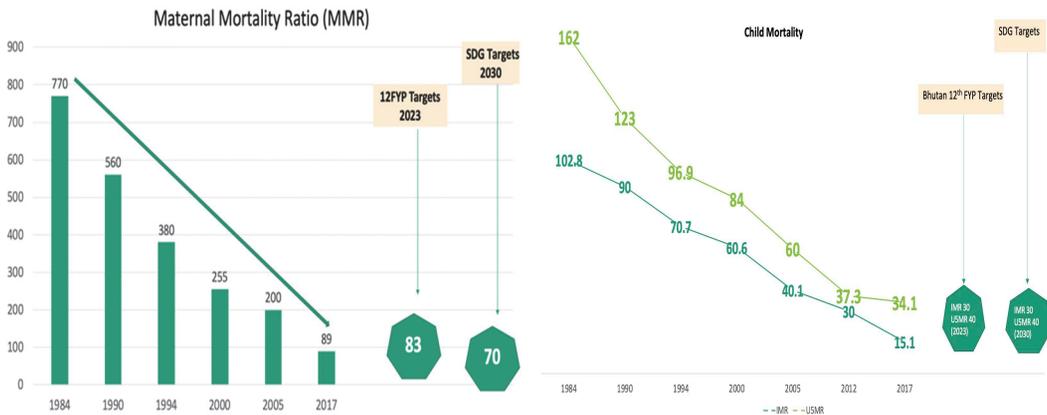

Fig 3: Trend in top-ten causes of mortality in Bhutan over the years (Based on HMIS data)

## 2. Reproductive, Maternal, Newborn and Child Health (RMNCH)

The Reproductive, Maternal, Newborn and Child Health (RMNCH) has made significant progress over the years. Almost all pregnant woman attended at least one antenatal care visit in 2019 as compared to only 51% in 2000 and over 54% of them attended more than eight antenatal care visits last year<sup>7</sup>. Institutional delivery coverage has seen drastic increase from as low as 10% in 1994 to over 94% in 2019. Immunization coverage has been sustained at >95% nationwide for the last 10 years<sup>9</sup>. In January 2019, influenza vaccine was introduced in the routine immunization program for high risk groups. Postnatal care coverage stands at over 74% and is set to increase to 90% by the end of 12th FYP<sup>10</sup>. The high coverage in the RMNCH services has translated into drastic reduction of maternal and child morbidities with concomitant reduction in mortality due to preventable causes.

**Fig 4:** Trend in maternal and child mortality (Based on NHS 1984, NHS1994, NHS 2000, NHS 2012, PHCB 2005 and PHCB 2017)

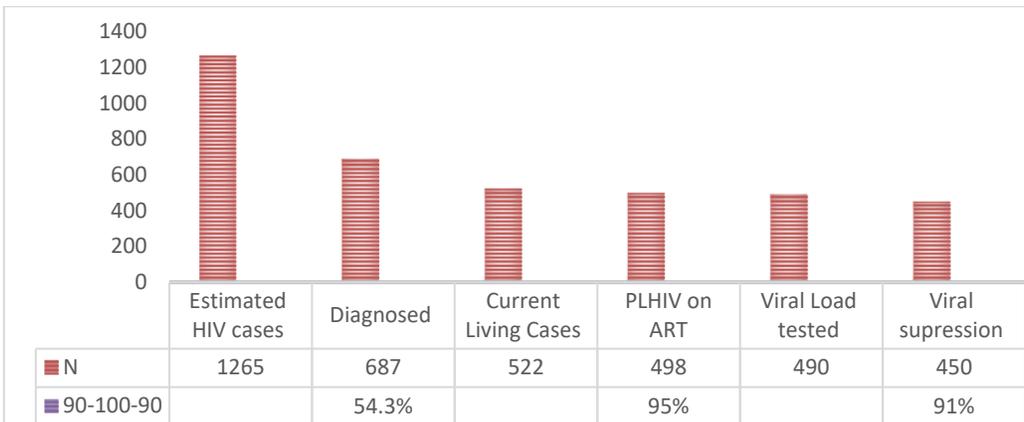

Reducing neonatal mortality which constitutes about 56% of under-five deaths remains to be one of the key challenges. The majority of the newborn deaths are due to preterm births, neonatal sepsis, and birth asphyxia which are largely preventable in nature. Continued investments and focused efforts must be made to ensure adequate care during pregnancy, childbirth, and preconception phase for a of the total cases diagnosed in the country positive experience during pregnancy and for better delivery outcomes. Further, with one-fifth of under-five children stunted and two in five children anaemic in Bhutan, malnutrition remains persistently a major public health issue<sup>8</sup>. To improve the quality of complementary food for children aged six months to two years of age, the Ministry of Health launched the “Sprinkles” programme in 2019<sup>9</sup>. Overall, Bhutan is well on the track to achieve SDG targets which calls for reducing maternal mortality ratio to less than 70 per 100,000 live births and ending preventable deaths of newborns and children under 5 years of age<sup>11</sup>.

### 3. Major Communicable Diseases

#### 3.1 HIV/AIDS

In 2019, 60 new HIV cases were detected (36 males and 24 females), taking the cumulative figure of the total cases diagnosed in the country to 687 since the detection of the first case in 1993. The prevalence of HIV among adults (15-19) stands around 0.8 which is still a modest burden in the region. Despite, sustained advocacies and public awareness, social stigma and discrimination associated with the disease continue to pose grave challenges for prevention and control of HIV/AIDS. Such social factors hinder people with the disease from disclosing their status to family, friends and sexual partners for timely diagnosis and treatment, contributing to the overall

detection gap 46%. Nevertheless, Bhutan is committed to SDG to end the epidemics of AIDS by 2030. The National AIDS Control Programme aims to achieve the set national target of 90-100-90 derived from the UNAIDS global target of 90-90-90. This means by 2023, 90% of all people living with HIV will know their HIV status, 100% of all people with diagnosed HIV infection will receive sustained antiretroviral therapy and 90% of all people receiving antiretroviral therapy will have viral suppression<sup>12</sup>.

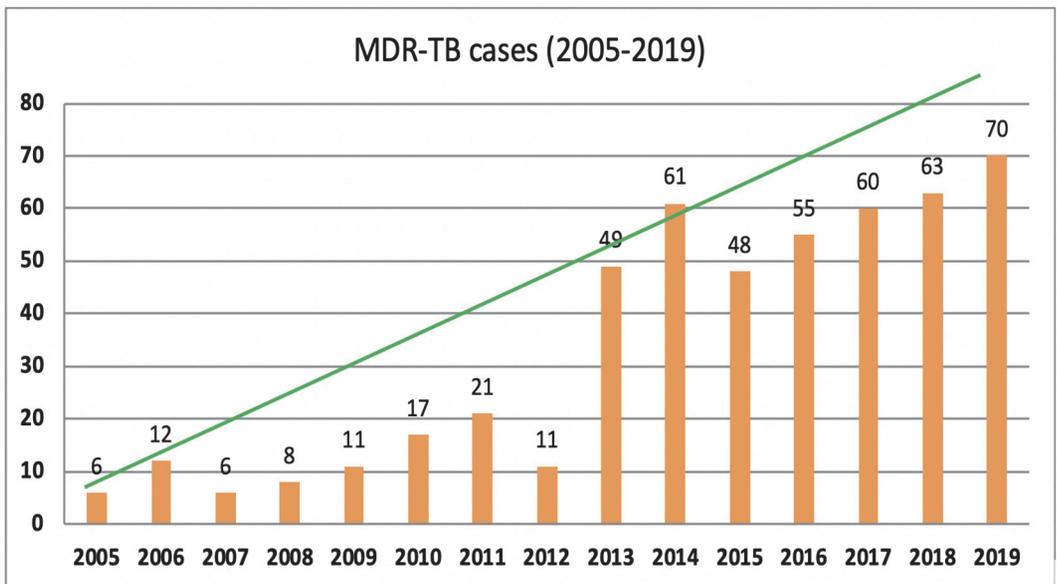

**Fig 5:** The treatment cascade 90-100-90 target status of Bhutan (Data from NACP, MoH)

### 3.2 Tuberculosis

Bhutan is considered a relatively low Tuberculosis (TB) burden country in South-East Asia Region with an estimated incidence rate of 149 per 100,000 population<sup>13</sup>. The sustained efforts of the government towards TB control have led to substantial increase in TB notifications and improvement in diagnostics, adherence, and treatment outcomes. The treatment success rate for all forms of TB was 95% in 2018 and 98% for Multi-Drug Resistance TB (MDR-TB) for the 2017 cohort, comparatively higher than many countries in the region. However, with high case detection gaps and increasing number

of MDR-TB, controlling TB continues to be a major public health concern in Bhutan. The prevalence of MDR-TB was reported at 13% in new cases and 20% amongst the retreatment cases in 2018 which are high than WHO estimates. The ministry has adapted the Global End TB Strategy into its National Strategic Plan II (2017-2023) which is targeted to achieve 12<sup>th</sup> FYP goals and SDG target to end the epidemic of tuberculosis by 2030<sup>14</sup>.

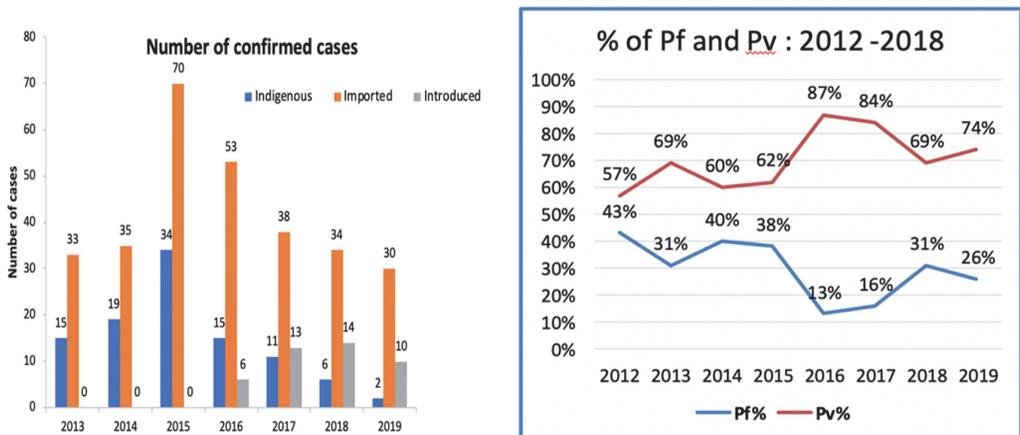

**Fig 6:** Trend in MDR-TB cases over the years (Data source NTCP, MoH)

### 3.3 Malaria

Bhutan has seen an impressive decline in the overall incidence of malaria morbidity and mortality over a few decades. One of the successful interventions was the high utilization of long-lasting insecticidal nets (LLIN) with its coverage of almost 100% among risk population<sup>15</sup>. With the malaria Annual Parasite Incidence (API) below one per 1000 risk population since

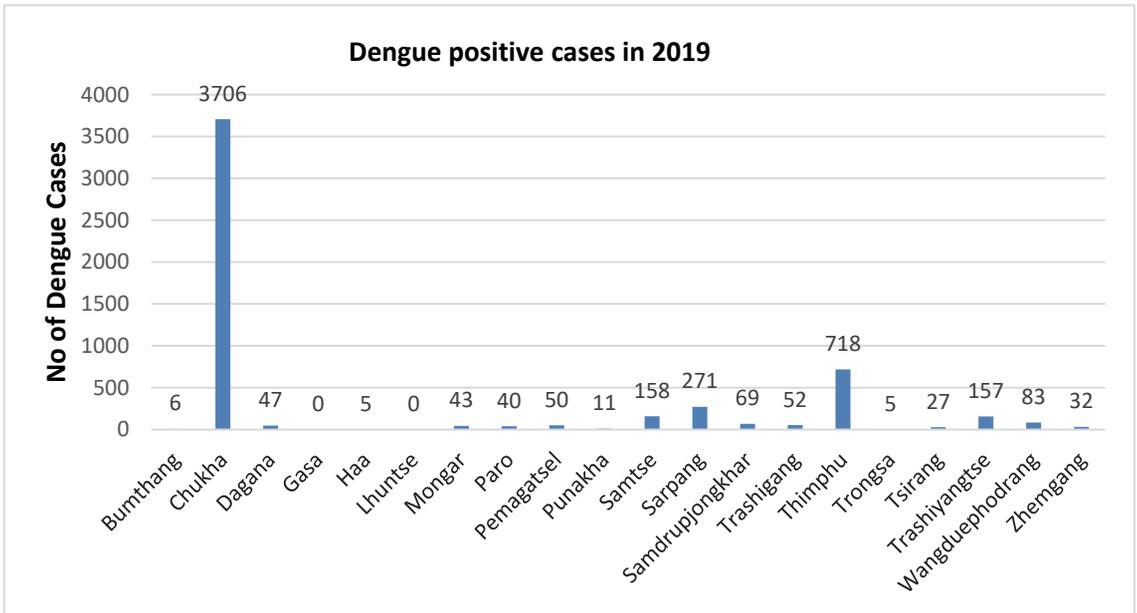

2010, the ministry was prompted to move for malaria elimination by 2018. However, the target could not be achieved due to 54 malaria cases reported in the same year including six indigenous cases. In 2019, there were 42 reported malaria cases with two indigenous, 30 imported, and 10 introduced cases. As malaria endemic areas mostly situated along the international border, curbing the cross-border malaria transmission is a major obstacle to achieve malaria elimination in Bhutan. With the implementation of National Malaria Strategic Plan 2020-25, the Ministry aims to achieve malaria elimination by 2020 and WHO Certification by 2022<sup>16</sup>.

**Fig 7:** The trend in the number of Malaria cases over the years (Data source VDCP, MoH)

### 3.4 Dengue

Dengue is a notifiable disease of public health concern in Bhutan. Since its first outbreak in 2004, seasonal outbreaks have occurred between 2010 and 2017 with the reported cases ranging from 500 to 1000. However, the country witnessed a major outbreak in 2019 with total cases of 5480, reported from 18 of the 20 districts. The majority of the cases were reported from Phuentsholing Hospital under Chukha District with 3517 cases, making up 64% of the total. The analysis of 2019 cases revealed that dengue is more common in adults (20-40 years of age) with a mean age of 29.5 years. As quarter of the reported cases were below 20 years of age in the outbreak areas, WHO reported that Phuentsholing could be gradually advancing to a hyper-endemic state where multiple serotypes co-circulate exposing the community to dengue virus at an early age. The dengue is transmitted by female mosquitoes mainly of the species *Aedes aegypti* and the presence of *Aedes* vectors in most of the districts is a concern as it makes the population vulnerable for explosive outbreaks. In view of the rapidly emerging nature of dengue outbreaks globally and the recent explosive outbreaks in the country, the ministry has developed the preparedness and response plan to prevent and control dengue in Bhutan<sup>17</sup>.

**Fig 8:** Dengue positive cases by districts in 2019 (Data source: Communicable Disease Division, MoH)

#### 4. Noncommunicable Diseases

While communicable diseases remain a substantial burden to the health system, noncommunicable diseases (NCDs) are on the rise. In 2019, conditions such as hypertension, cardiovascular diseases (CVDs), cancers, and diabetes accounted for 71% of the reported deaths in the country<sup>7</sup>. Being chronic in nature and needing special treatments, NCDs pose devastating health consequences for individuals and families and, burden the overall health system. One of the implications of rising NCD epidemic in Bhutan is the increasing cost of referrals out of the country which is currently estimated around 5% of the health expenditure<sup>18</sup>. The rapidly growing magnitude of the disease is largely due to changes in lifestyle, dietary habits, access to unhealthy diet and aging population. In 2019, a Nationwide WHO STEPS

Survey on risk factors for noncommunicable diseases revealed that the Bhutanese are exposed to varied risk factors: 33.5% were overweight; 28 % had raised blood pressure; 1.9% had raised blood sugar, and 86.4% of them were not consuming the recommended five servings of fruits and vegetables<sup>19</sup>.

Indicators	2005	2017	2018	2019
Alcohol Liver Diseases Incidence (per 10,000 population)	19.2	35.0	37.5	38.0
Cancer Incidence (per 10,000 population)	8.7	17.0	23.0	26.8
Diabetes Incidence (per 10,000 population)	14.9	82.0	78.0	75.0
Depression Incidence (per 10,000 population)		6.0	9.6	10.4
Hypertension Incidence (per 10,000 population)	261	278	343	307

**Table 1:** Trend in Noncommunicable Diseases over the years (as per the HMIS data)

In view of strengthening early detection and prevention of NCDs, the WHO Package of Essential NCD (PEN) was implemented as the national program since 2013. Consequently, there was a significant reduction in the prevalence of diabetes from 6.4% in 2014 to 1.9% in 2018 and hypertension from 37% in 2014 to 28% during the same period. The PEN HEARTS approach to combat NCDs was introduced in 2019 to reinforce the implementation of PEN through six components: **H**ealthy lifestyle counselling, **E**vidence based, **A**ccess to medicine and technology, **R**isk based approach, **T**eam based and **S**ystems of monitoring. With the success of pilot projects on HEARTS in two districts of Tsirang and Punakha in 2019, the Ministry of Health is planning to roll out the HEARTS approach in all districts<sup>19</sup>.

## 5. Service Capacity and Access

### 5.1 Health Infrastructure

Starting with only two hospitals and 11 dispensaries in 1961, the number of health facilities rose to 3.9 per 10,000 population in 2019<sup>6</sup>. In keeping with changing dynamics in the delivery of healthcare and to align the ministry's efforts to strengthen the Primary Health Care approach, the nomenclature of certain health facilities has been changed (Table 2)<sup>20</sup>:

Old Nomenclature	New Nomenclature
BHU Grade II	Primary Health Center
BHU Grade I	10-Bedded Hospital
Satellite Clinic	Thromde Health Center
Other Health Facilities	Status Quo

**Table 2:** Nomenclature change for health facilities (as per the notification no: MoH/DMS/HCCDD/DHSP/17/2008-2023/9349 dated 13/01/2020)

With the change in nomenclatures, country now has 49 hospitals including the National Traditional Medicine Hospital (NTMH), 186 Primary Health Centers, 53 Sub-posts, 542 Outreach Clinics (ORCs) three Thromde Health Centers, and five Health Information and Service Centers (refer table 6.1 for details). To address the emerging challenges associated with evolving health needs and rising demand for better healthcare services, the Ministry of Health continues to invest in infrastructural development including consolidation and up-gradation of the existing health facilities.

Sl. No.	Category of health facilities	Numbers
1.	Hospitals	49
2.	Primary Health Center	186
3.	Sub-post	53
4.	Out-reach Clinic (ORC)	542
5.	Thromde Health Center	3
6.	Health Information and Service Center (HISC)	6

**Table 3:** Type of health facilities in 2019

## 5.2 Human Resource for Health

In 2019, the total number of health workforce was report at 5901, comprising of 376 medical doctors, 1187 medical technologist and technicians, 620 Health Assistants, 1364 Nurses, 54 Drungtshos, 116 Menpa and Therapy Aide, and 2184 administrative and support personnel<sup>21</sup>(refer table 6.2 for details).Overall, the health workforce has increased by about 12% between 2018 and 2019.

Sl. No	Category of health workforce	Numbers
1	Medical Doctor	376
2	Medical Technologist& Technician	1187
3	Health Assistant	620
4	Nurse	1364
5	Drungtsho	54
6	Menpa/Therapy Aide	116
7	Administration & Support	2184
	<b>Total</b>	<b>5901</b>

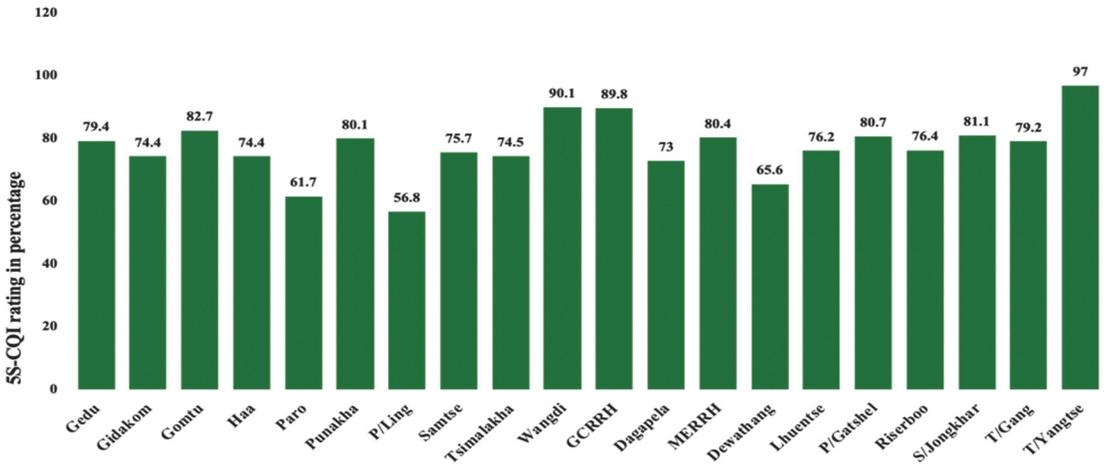

**Table 3:** Human resource for health (Data source: HRD, MoH)

The doctor to population ratio stood at 0.5 in 2019 which is 50% below the WHO recommended ratio of 1 doctor per 1000 population. Similarly, the nurse to population ratio is 18.4 per 10,000 population which is still lower than most countries in Southeast Asia. The ratio of beds per nurse has reduced from 1.7 in 2012 to 1.1 in 2019. The Ministry of Health has been according high priority on human resource development to overcome the shortage both in terms of quantity and specialties. Currently, about 85 medical doctors are undergoing long-term training in diverse fields of speciality both within and outside the country<sup>21</sup>.

### **5.3 Quality Assurance and Standardization of healthcare service delivery**

Ensuring quality of healthcare services is critical to achieving universal health coverage and meeting the health-related SDGs. The Ministry of Health has adopted and implemented the Bhutan Health Standard for Quality Assurance (BHSQA) and 5S-CQI\* Strategy which comprises of 10 Themes, 116 Standards, 639 Elements objectives and numerous SOPs. While implementation of (BHSQA) and 5S-CQI has resulted in positive impact in the standards and quality of care across the health facilities, the poor coordination and ownership building within the implementing health centres is seen as the key issue in sustaining the effort<sup>22</sup>. (*\*5S stands for Sort, Set, Shine, Standardize, and Sustain & CQI stands for Continuous Quality Improvement*).

5S-CQI Performance among hospitals, 2018

Source: QASD

Fig 8: 5S-CQI Performance among hospitals (Source: QASD, MoH)

5.4 Health Financing

The healthcare in Bhutan is predominantly financed by the government in line with the constitutional mandate of providing free access to basic public health services. The total health expenditure as a share of GDP has remained around 4% over the years<sup>23,24</sup> and the government share of current health expenditures constituted 70% in 2016. The per capita spending in healthcare has increased over the period of time from Nu. 1400 in 2000-2001 to Nu. 7,512.00 in the fiscal year 2015-2016. The Out-of-Pocket (OOP) expenditure for health, has seen a steady increase from 11% in 2010, to 12% in 2014, and to 20% in 2016. External support has been instrumental in financing Bhutan’s healthcare for decades, making up as high as 30% of the health expenditure in 1996<sup>18</sup>. However, its share has been decreasing over the past few years, with the recent status reported at around 9.5%. On the other hand, the support of Bhutan Health Trust Fund (BHTF) is gaining its prominence in

aiding Bhutan's healthcare financing with its share drastically increased from a mere 0.042% in 2010 to 5.14% in 2014<sup>24</sup>. The role of BHTF is expected to increase in the coming years with the gradual phasing out of the traditional donors.

Although the constitution guarantees access to free health services, the ever-increasing healthcare cost coupled with the declining share of external resources is a critical challenge undermining the sustainability aspect of free health care. The rising health care expenditure is mainly driven by increasing population, changing epidemiology and evolving health needs, and rising demand for better healthcare services. To address the fiscal space, there is a need to strengthen our effort to foster measures to prioritize and redistribute resources to areas where we can maximize our efficiency and bring about better health outcomes.

## **Part II: Health Data & Statistics**

## Section 1: Health Indicators

**Table 1.1: Sustainable Development Goals and Equivalent National Indicators of Bhutan – 2019**

SDG Goals	SDG Targets	SDG Indicators	National Equivalent SDGI	Current status
Goal 3. Ensure healthy lives and promote well-being for all at all ages	3.1 By 2030, reduce the global maternal mortality ratio to less than 70 per 100,000 live births	3.1.1 Maternal mortality ratio (Per 100,000)		89
		3.1.2 Deliveries attended by skilled health worker (%)	Deliveries attended by skilled health worker (%)	96.3
			Institutional delivery (%)	94.5
	3.2 By 2030, end preventable deaths of newborns and children under 5 years of age, with all countries aiming to reduce neonatal mortality to at least as low as 12 per 1,000 live births and under-5 mortality to at least as low as 25 per 1,000 live births	3.2.1 Under-5 mortality rate (Per 1000)		34.1
		3.2.2 Infant Mortality Rate (Per 1000)		15.1
	3.3 By 2030, end the epidemics of AIDS, tuberculosis, malaria and neglected tropical diseases and combat hepatitis, waterborne diseases and other communicable diseases	3.3.1 Number of new HIV infections per 1,000 uninfected population, by sex, age and key populations	Total new cases	60
			Total new cases (male)	36
			Total new cases (female)	24
			Prevalence of HIV among adults (15-19)	0.8
		3.3.2 Tuberculosis incidence per 100,000 population	Total TB cases detected	91

Contd/.....Table 1.1

SDG Goals	SDG Targets	SDG Indicators	National Equivalent SDGI	Current status
		3.3.3 Malaria incidence per 1,000 population	Malaria incidence (indigenous) per 1,000 population	0
		3.3.4 Hepatitis B incidence per 100,000 population	Total Morbidity cases with Acute Hepatitis B	309
	3.4 By 2030, reduce by one third premature mortality from non-communicable diseases through prevention and treatment and promote mental health and well-being	3.4.1 Mortality rate attributed to cardiovascular disease, cancer, diabetes or chronic respiratory disease	Total Mortality due to Rheumatic heart disease and ischamatic heart disease	19
			Total Mortality due to Cancer	149
			Mortality due to diabetes	11
			Mortality due to respiratory disease	204
		3.4.2 Suicide mortality rate	Suicide Mortality rate per 100,000 population	12
	3.5 Strengthen the prevention and treatment of substance abuse, including narcotic drug abuse and harmful use of alcohol		Percentage of population aged 15-75 years who ever used drugs/substance to get high	2.1

Contd/.....Table 1.1

SDG Goals	SDG Targets	SDG Indicators	National Equivalent SDGI	Current status
	3.6 By 2020, halve the number of global deaths and injuries from road traffic accidents	3.6.1 Death rate due to road traffic injuries (per 100,000 population)		11.3
	3.7 By 2030, ensure universal access to sexual and reproductive health-care services, including for family planning, information and education, and the integration of reproductive health into national strategies and programmes	3.7.1 Proportion of women of reproductive age (aged 15–49 years) who have their need for family planning satisfied with modern methods	Contraceptive prevalence rate (aged 15-49)	65.6
Unmet need for family planning			11.7	
Percentage of women aged 15-49 years who knew at least one contraceptive method that could prevent or delay pregnancy			96.3	
		3.7.2 Adolescent birth rate (aged 15– 19 years) per 1,000 women in that age group		28.4

Contd/.....Table 1.1

SDG Goals	SDG Targets	SDG Indicators	National Equivalent SDGI	Current status
	3.8 Achieve universal health coverage, including financial risk protection, access to quality essential health-care services and access to safe, effective, quality and affordable essential medicines and vaccines for all	3.8.1 Coverage of essential health services (defined as the average coverage of essential services based on tracer interventions that include reproductive, maternal, newborn and child health, infectious diseases, non-communicable diseases and service capacity and access, among the general and the most disadvantaged population)	Percentage of population within 2 hours to the nearest health facility	87.7
		3.9.2 Mortality rate attributed to unsafe water, unsafe sanitation and lack of hygiene (exposure to unsafe Water, Sanitation and Hygiene for All (WASH) services)	Percentage of death due to illness	

Contd/.....Table 1.1

SDG Goals	SDG Targets	SDG Indicators	National Equivalent SDGI	Current status
		3.9.3 Mortality rate attributed to unintentional poisoning	Percentage of death due to unintentional poison/ Percentage of death due to alcohol related	4.8
	3.a Strengthen the implementation of the World Health Organization Framework Convention on Tobacco Control in all countries, as appropriate	3.a.1 Age standardized prevalence of current tobacco use among persons aged 15 years and older	Population aged 15-75 years who use prevalence of any form of smokeless tobacco use in Bhutan	47.9
			Population aged 15-75 years who are current smoker	41
	3.b Support the research and development of vaccines and medicines for the communicable and non-communicable diseases that primarily affect developing countries, provide access to affordable essential medicines and vaccines, in accordance with the Doha Declaration on	3.b.1 Proportion of the target population covered by all vaccines included in their national programme	Crude childhood immunization coverage	95.1
			Proportion of 1year-old children immunized against measles (MR1)	97.2
			BCG	100
			DTP-HepB1	99.6
			DTP-HepB2	99.1
			DTP-HepB3	98.7
			OPV0	96.3

SDG Goals	SDG Targets	SDG Indicators	National Equivalent	Current status
	the TRIPS Agreement and Public Health, which affirms the right of developing countries to use to the full the provisions in the Agreement on Trade Related Aspects of Intellectual Property Rights regarding flexibilities to protect public health, and, in particular, provide access to medicines for all		OPV1	99.2
			OPV2	99
			OPV3	97.4
			Crude HPV vaccination coverage	90.5
			Crude maternal TT1 coverage	97.9
		3.b.3 Proportion of health facilities that have a core set of relevant essential medicines available and affordable on a sustainable basis	Proportion of essential medicines available in all health facilities at any point of time	95
3.c Substantially increase health financing and the recruitment, development, training and retention of the health workforce in developing countries, especially in least developed countries and small island developing States		3.c.1 Health worker density and distribution	Doctors density per 10,000 population	318 (4.32)
			Nurses density per 10,000 population	1364 (18.6)
			Pharmacists density per 10,000 population	43 (0.6)
			Health Assistants & Basic Health workers density per 10,000 population	620 (8.4)

Contd/.....Table 1.1

SDG Goals	SDG Targets	SDG Indicators	National SDGI	Current status
			Indigenous Physicians density per 10,000 population	54(0.7)
			Sowa Menpa density per 10,000 population	116(1.6)
			Distribution of health facilities per 10,000 population	288 (3.9)
			Ratio of beds per Nurse	0.8
			Ratio of Nurses per Doctor	4.3
Goal 6. Ensure availability and sustainable management of water and sanitation for all	6.1 By 2030, achieve universal and equitable access to safe and affordable drinking water for all	6.1.1 Proportion of population using safely managed drinking water services	Access to improved drinking water sources (%) (Piped water)	98.6
	6.2 By 2030, achieve access to adequate and equitable sanitation and hygiene for all and end open defecation, paying special attention to the needs of women and girls and those in vulnerable situations	6.2.1 Proportion of population using safely managed sanitation services, including a hand washing facility with soap and water	Proportion of population using an improved sanitation facility (%)	74.82 (PHCB)
	6.5 By 2030, implement integrated water resources management at all levels, including through transboundary cooperation as appropriate	6.5.1 Degree of integrated water resources management implementation (0– 100)	Water Security Index (1-5)	3.06

Table 1.2a: Selected health indicators and their trend for past five years

Sl.#	Indicators	Year					Source
		2015	2016	2017	2018	2019	
1	Alcohol Liver Diseases incidence (per 10,000 population)	41	46	35	37.5	38	HMIS, MoH
2	Cancer incidence (per 10,000 population)	13	13	17	23.02	26.8	HMIS, MoH
3	Conjunctivitis incidence (per 10,000 population)	395	341	279	311	305	HMIS, MoH
4	Diabetes incidence (per 10,000 population)	164	158	82	78	75	HMIS, MoH
5	Diarrhoea incidence (per 10,000 under 5 children)	2004	1755	1448	1392	2040	HMIS, MoH
6	Depression incidence (per 10,000 population)	9	10	6	9.6	10.4	HMIS, MoH
7	Hypertension incidence per 10,000 population	458	393	278	343	307	HMIS, MoH
8	Intestinal Worms incidence (per 10,000 under 5 children)	96	66	27	48	32.5	HMIS, MoH
9	Incidence of indigenous malaria (per 10,000 population at risk)	2	2	0	0	0	HMIS, MoH
10	Pneumonia incidence (per 10,000 under 5 children)	905	991	809	1274	1099	HMIS, MoH
11	Skin infections (per 10,000 population)	1218	1197	1071	1079	1129	HMIS, MoH
12	STD/STI incidence (per 10,000 population)	92	73	54	54		HMIS, MoH
13	Tuberculosis prevalence rate (per 10,000 population)	13	15		12.62	13	HMIS, MoH
