## FOREWORD

In this age of information and data, numbers play a significant role from something as minute as day to day management of an office to making key policy decisions. This relevance of data and information is particularly significant in the health sector where services are delivered to patients on a daily basis and numerous public health activities are carried out for building a healthy nation. In this light, Health Management Information System (HMIS) was strengthened as a web-based system (DHIS2) since May 2014 from earlier standalone MS Access-based HMIS. All hospitals, all Basic Health Units Grade-I and 62 Basic Health Units Grade-II are directly reporting data through web-based HMIS. The web-based HMIS will be rolled out to remaining BHU-II when connected with internet. The web-based HMIS is expected not only to reduce possible data entry errors but also reduces workload at Dzongkhag Health Offices.

Since 1986, the Ministry of Health has been publishing the Annual Health Bulletin with the aim of disseminating annual data to influence evidence-based decision and policy making. The Ministry of Health is pleased to publish the Annual Health Bulletin 2018, the 31st in its series, which is a compilation of all annual health related data collected routinely from the health facilities through web-based system (DHIS2) and other sources. It also comprises a summary of the health-related Sustainable Development Goals.

Lastly, it's my sincere expectation that the readers particularly the stakeholders of health such as government agencies, policy makers, planners, Non-Government Organizations, international agencies, development partners, healthcare providers, programme managers, academia, and researchers will find this bulletin informative and handy.

## **PART ONE: STATE OF NATION'S HEALTH 2017**

### **INTRODUCTION**

Since inception of the planned socio-economic development in 1960s, Bhutan has developed from an emergent health system to a closely-knit network of health facilities catering to the health needs of its people. There are 211 Basic Health Units, 52 subposts and 551 ORCs at primary level, 26 hospitals at secondary level and three referral hospitals at the tertiary level, spread across the country. Health services are delivered free of cost at the point of delivery and is mainly financed by the government.

This predominantly public financed and managed health system in Bhutan has grown remarkably through expansion of the coverage in the past to recent measures on strengthening the quality of care, thus gearing towards realization of the Ministry's vision of nation with best health. Such measures in health delivery system has offered high levels of financial risk protection to the population and greatly enhanced the health status of the nation. A steady decline in direct household payment as a share of total health expenditure was observed during the last few decades, owing mainly to the enhanced service delivery. This has significantly improved the population health outcomes and life expectancy at birth thus entering among the global top performers in life expectancy gains in last 40 years (60.7 years (2000) to 69.8 years (2015)).

Further the health service delivery has been enhanced by the provision of traditional medicine (TM) services from 61 TM units and one national TM hospital. While the utilization of the TM services has doubled during past five years efforts are being made towards mainstreaming the TM services through increase in service delivery points, cross referral and diversification of the traditional medicine services.

## SECTION 1: DEMOGRAPHIC TRENDS

Growth of population is determined by fertility, mortality and migration rates. As per the Bhutan Living Standard Survey (BLSS) 2017, Bhutan is experiencing decline in total fertility rate (TFR) and increase in longevity (life expectancy). The TFR as of 2017 was estimated at 1.9 which is

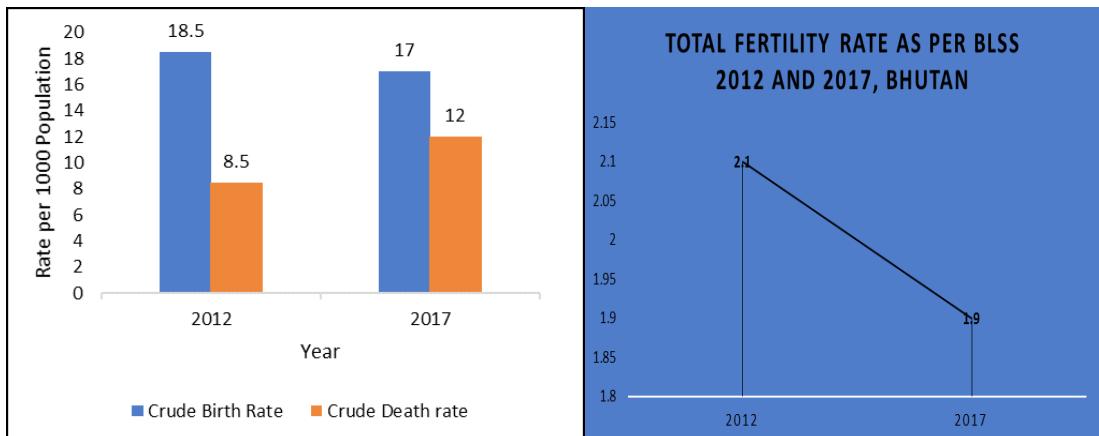

Figure 1: Difference in CDR, CBR and total fertility rate as per BLSS 2012 and 2017

below the replacement rate of 2.1.

Crude Birth Rate (CBR) and Crude death rate (CDR) as per the BLSS 2012 and 2017. Between 2012 and 2017, the Crude Birth Rate (CDR) has decreased from 18.5 per 1000 population to 17.0; however, the Crude death rate (CBR) has increased from 8.5 to 12 per 1000 population (Figure 1).

## SECTION 2: MORTALITY AND MORBIDITY

### 1. Morbidity trends and main causes

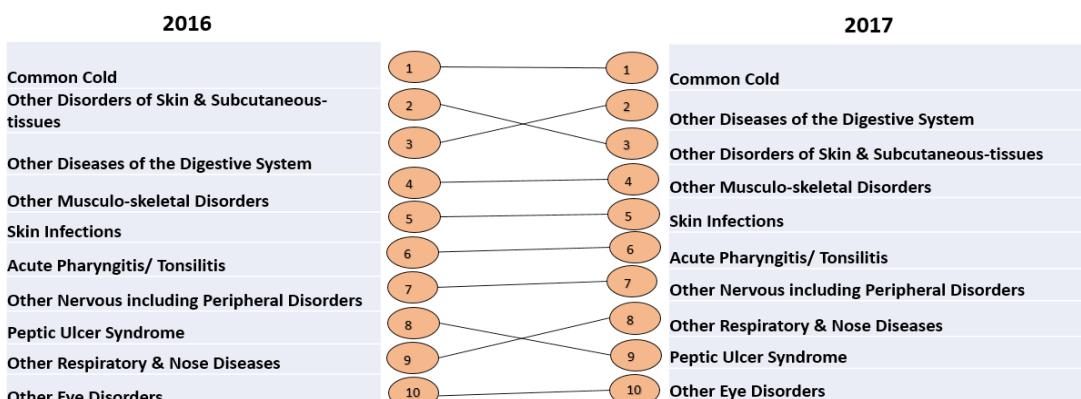

Figure 2: Top 10 causes of morbidity and their trend for 2016 and 2017

There has been impressive progress in the reduction of diarrheal and conjunctivitis cases in recent past. The cases of diarrhea reported by health facilities decreased by 3.08% and conjunctivitis by 6.20% annually on an average for the past five years.

## 2. Mortality Trends and Main causes

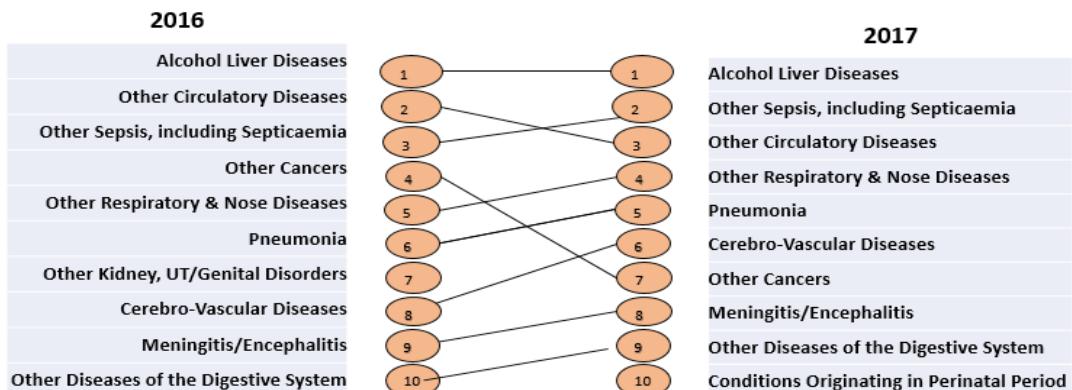

Figure 3: Top 10 causes of mortality and their trend for 2016 and 2017, Bhutan

Alcohol liver disease is the leading cause of deaths in Bhutan. However, the total number of deaths related to alcohol has decreased from 190 in 2016 to 166 in 2017 and the incidence of alcohol liver diseases per 10,000 population has decreased from 46 in 2016 to 35 in 2017.

The life expectancy of Bhutanese population has increased from 32.4 in 1960 to 69.5 in 2015 (Table I). Adult mortality rates have also declined substantially over the past decades.

**Table 1: Selected Indicators and Their Trends**

Indicators	Year		
	1960	2000	2015
<b>Life expectancy at birth</b>	32.4	60.7	69.5
<b>Female mortality rate (adults aged 15-60 years)</b>	583.1	300.7	216.4
<b>Male mortality rate (adults aged 15-60 years)</b>	602.1	288.9	209.7

## SECTION 3: HEALTH CARE FINANCING TRENDS

General government revenue is the predominant source of health financing followed by the household and external aids. As per the national health accounts 2017, the sum of current and capital expenditures in FY 2014-15 and FY 2015-16 were Nu. 5.3

billion and Nu. 5.8 billion respectively and accounts for 4.4% of the GDP.

**Table 2: Health financing indicators as per National health Accounts, Bhutan**

## SECTION 4: PHYSICAL AND HUMAN RESOURCES FOR HEALTH

**Table 3: Health Human resource and its trend from 2012 and 2017, Bhutan**

Sl.#	Categories of Health Workers	2012	2017
1	Doctors (MBBS/Specialists)	194	345
2	Clinical Officer/Assistant Clinical Officers	39	25
3	Nurses (Assistant Nurse/GNM/B. Sc. Nurse)	736	1264
4	Health Assistants	416	600
5	Basic Health Workers	162	36
6	Drungtshos (Indigenous Physicians)	35	55
7	sMenpas (Sowa Menpas)	63	113
8	Pharmacists	11	36
9	Medical Lab. Technologists	27	74
10	Physiotherapists	10	21
11	Technicians	780	931
12	Administrative & Support Staff (Regular)	1202	1010
13	General Service Personnel (GSP)	439	432
14	Elementary Service Personnel (ESP)	166	162

In general, the human resource for health has increased by 19% since 2012 with balanced distribution of health workers among the three regions of the country. Although there are more male than female health workers in other categories of health work force, number of female nurses is still higher than the male.
